

Roofing Installation Checklist

Use the following checklist to ensure that your roofing job is completed to your satisfaction.

Before work begins, the installer:

- Walks around the property to inspect the condition of siding, eaves trough, driveway, bushes and shrubs
- Explains what steps will be taken to protect your property
- Opens one pack of shingles to verify that you are getting the shingles you selected

After completion, the installer:

- Checks to make sure that all work-related debris has been removed from the area
- Checks that a magnetic broom was used to drag for nails in the grass, on the driveway and around the perimeter of the house
- Verifies that the shingle pattern is neat and consistent
- Checks to ensure that flashing and caulking is professionally applied
- Verifies that your property has been protected as thoroughly as possible
